

"BUGGED" ?

DON'T YOU BE THE VICTIM OF
ELECTRONIC EAVESDROPPING.

Hidden miniature transmitters (bugs), telephone bugs, etc. . . . these are the startling facts of today's business world. The "olive" in your companion's martini could be a transmitter (or the button on his suit, the flower in her hat!). Is everything you say private . . . or is it really being taped 2 blocks away? To prevent this industrial espionage, Dectron's tiny ANTIBUG jams all electronic eavesdropping bugs within range of your voice. Silent and concealed, it's your secret, to protect your secrets. Invented, designed by aerospace engineers. Smaller than a cigarette pack. Solid state circuitry, reliability. Guaranteed. Complete with battery re-charger. ANTIBUG. Order direct, only \$89.95, postpaid. Major credit cards honored.
